

Menthogen data sheet

Menthogen is a unique clinical formulation of scalp coolants, astringents, anti-inflammatory and anaesthetic agents that together provide instant relief of scalp itch / irritation - regardless of the level of severity. Menthogen is a fast-acting, long lasting spray that stops scalp itch and prevents it returning. Menthogen works instantly to cool and soothe the scalp, combating any irritation.

How does Menthogen work?

Menthogen is a unique, clinically tested and proven formulation of effective moisturisers, anti-irritants and antibacterial agents which rapidly impart their soothing and regenerative properties to the scalp, clearing any trace of irritation. Regular use of Menthogen harmonises the scalp and optimises the conditions for complete scalp health and hygiene.

Menthogen also contains key ingredients to combat traction alopecia; premature loss of hair exacerbated by tightly fitted headwear. Firstly a vaso-dilator increases capillary blood flow to the scalp and its hair bulbs, increasing nutritional take up. Secondly two ingredients act to prolong the growing stage of hair whilst counteracting the growth inhibitory effect of testosterone.

Who has developed Menthogen?

Menthogen is the creation of a team of UK trichologists with over 50 years clinical experience in treating scalp maladies and of formulating and manufacturing products for clinical and salon use.

How should Menthogen be used?

Menthogen should be used once daily and occasionally as needed by parting the hair & spraying directly onto scalp from around three inches. Disperse lotion with fingertips massaging into scalp for a few seconds. Repeat until the affected area of the scalp has been covered. Wash hands thoroughly after use.

The scalp may tingle slightly and a slight reddening of the skin *may* appear. This is the normal effect of the vaso-dilators and does not last very long. Menthogen should always be applied onto a clean scalp - for best results use with M-GEN Shampoo.

What ingredients are contained in Menthogen?

Menthogen contains Alcohol, Aqua, Propylenum Glycorum, Salvea Sclarea, Cedrus Manetti, Humulus Lupus, Menthol, Cof-feinum, Estradolium, Acidum Citricum, Methyl Nicotinicum, Pi-roctone Olamine, Alkyl Dimethyl Benzyl Ammonium Chloride.

Contraindications

Menthogen should **not** be used if you are allergic to any of the ingredients in it. Menthogen should not be applied to broken or damaged skin. Care should be taken to avoid spraying into the eyes; if accidentally sprayed into eyes then bathe eyes with clean cold water. Menthogen should not be used on children.
